DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leitch et al. (5,546,411).

Regarding claim 3, Leitch discloses a method for transmitting and retransmitting a data signal from a base station to a mobile station (figs. 2-3, abstract), comprising: a receiving processor (304,306) for carrying out receiving processing of a retransmitting signal in a predetermined later time (column 7 lines 10-11, 32-36); a quality detector (336) for measuring a quality of signal (column 7 lines 50-67); a reception processing decider (330,324) for determine whether to accept the data signal or requesting for retransmission data signal (column 8 line 1 to column 10 line 43). It should be noted that Leitch discloses that the retransmission of the data signal is predetermined later time which is obviously the retransmission of the data signal is within a predetermined period which is known to those skilled in the art in order to improve transmission efficiency.

Regarding claim 5, this claims is rejected for the same reason as set forth in claim 3, wherein Leitch further discloses the data signal is decoded (340 of fig.3, column 9 line 54)

Art Unit: 2685

Regarding claims 4 and 6, Leitch further discloses the quality detection detecting a SIR and a received power (RSSI) (column 8 lines 1-21).

Allowable Subject Matter

3. Claims 1-2 are allowed.

Regarding claims 1-2, the prior art of record disclose numerous method for transmitting and retransmitting a data signal between a base station and a mobile station based upon a quality determination a the mobile station.

The prior art of record fails to teach retransmitting each of data signals in a form different from that of the transmitted data signal and transmitting and retransmitting are within a predetermined period, which is the same predetermined period for transmitting and retransmitting data signals.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Uesugi et al. (2003/0072266) discloses a method for detecting a quality of a data signal at a mobile terminal transmitted by a base station. if the quality of data signal is lower than a threshold a retransmission data signal request is issued, then the base station will retransmit the data signal, wherein the quality of data signal detects a SIR and a signal strength (figs. 2, 4, paragraphs 35, 41-42).

Art Unit: 2685

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Simon Nguyen whose telephone number is (571) 272-7894. The examiner can normally be reached on Monday-Friday from 7:00 AM to 4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward F. Urban, can be reached on (571) 272-7899.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 306-0377.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

600 Dulany, Alexandria, VA 22314

Or faxed to:

(571) 273-8300 (for formal communications intended for entry)

Hand-delivered response should be brought to Customer Service Window located at the Randolph Building, 401 Dulany, Alexandria, VA, 22314.

Simon Nguyen
